FOCUSED**

# SUCCESS TIMELINE

# MAINTENANCE & SERVICING

---

CSIS has a standard call-out procedure for each system installed. CSIS endeavor to respond telephonically within the specified time frame and on site within 24 working hours of being notified. Qualified and trained technicians would respond to the specific project with the necessary tools and stock to attend to the fault(s), should the system require additional spares, these would be obtained within the shortest time required. Servicing of equipment is carried out by CSIS in-house capabilities. CSIS undertakes after sales service agreements and pride in the in-depth knowledge of its product base with central documentation for each project undertaken. Quality is an element of the attitudes of our technicians that has been carefully nurtured and is evident in the compliments received from clients.

- Voice Alarm & Evacuation Systems
- Walk Through Gates
- Ups & Structured Cabling

# CCTV SURVEILLANCE SYSTEMS

---

Our Physical Security Solutions integrate physical and information security factors to help safeguard your business's physical, network, application, data, and end-user layers. Our approach spans key areas, including: Video. Advance digital video technology gives an unprecedented level of organization and control over surveillance data and access to that information from anywhere in the world. Let our security professional design a system that ensures you see what you want, when you want. Access. Physical security is very much a "human" issue. We can examine and

enact visitor badge issuance and adherence measures; door access controls; lock configurations; and detection and monitoring mechanisms. Safety. Security systems and measures are ineffective if they're not properly deployed. We can evaluate and manage the placement and status of alarm systems; identify unsafe material-handling processes; and verify alarm functionality and visibility. Environment. We can deliver an in-depth evaluation of your physical location including the surrounding residential and commercial business environment to determine the best approach to combating criminal activity or collateral damage.

# BUILDING MANAGEMENT SYSTEM

BMS, developed by CSIS, can provide precise HVAC control whilst delivering genuine time management information. By applying a range of control and monitoring routines, it is capable of operating the building services in strict accordance with demand, thereby avoiding unnecessary use of energy. To achieve energy savings within your building, you must ensure that every building subsystem, from heating to security, works together as a cohesive unit. By bringing independent systems together, building automation leads directly to better performance and more intelligent energy use.

## VIDEO WALL SOLUTIONS

---

Control Room Application Applications used for monitoring can display a large amount of information in a format that's shared by many users simultaneously. Users need to be able

to easily see and work with that information – it has to be clear, reliable and precise, often meeting specific design and size requirements. Usually these walls of information called video walls – are made up of multiple displays that are seamlessly tiled together. Whether they're displaying people, processes, assets or infrastructure, seamless video walls offer an unmatched way to quickly and effectively share the large amounts of information needed for monitoring and control.

# APPLICATIONS
